

Capstone Project 1

★ Personal Portfolio Website

Short Brief

Students will design and build a **fully responsive personal portfolio website** using only **HTML and CSS**. The project will serve as a professional digital resume and showcase space for developers. It should feature structured content, responsive layout, stylish design, and thoughtful interactivity through animations and transitions.

This project consolidates all foundational front-end skills learned during the course.

Tech Competencies Acquired

By completing this project, students will acquire and demonstrate proficiency in:

- Structuring websites with **semantic HTML**
 - Designing modern responsive layouts using **CSS Flexbox and Grid**
 - Applying **CSS transitions, animations, and hover effects**
 - Using **media queries** for device responsiveness
 - Building **accessible, readable, and maintainable code**
 - Organizing scalable CSS with good naming conventions (e.g., BEM)
 - Version control using **Git and GitHub**
 - Writing and presenting basic **project documentation**
-

Project Context

Imagine you're a **junior front-end developer** or a freelancer preparing to apply for jobs or showcase your web capabilities.

You've been asked to design and publish your **personal portfolio website** that:

- Introduces you professionally 🧑
- Displays your skillset and background 🔧
- Showcases your projects 📁

- Allows potential employers or clients to contact you 📧

This site will act as your live resume, demonstrating your ability to structure, style, and present content effectively using just HTML and CSS.

✅ Project Requirements

1. HTML Structure

- Use **semantic HTML elements** (e.g., `header`, `main`, `section`, `footer`)
- Each section should be cleanly separated and logically ordered
- Include the following sections:
 - Hero / Landing
 - About Me
 - Projects Gallery
 - Contact Form
 - Footer

2. CSS Styling

- Use **Flexbox or CSS Grid** for layout
- Must be **fully responsive** across mobile, tablet, and desktop
- Use modern styling techniques:
 - `:hover`, `transition`, `@keyframes`, `box-shadow`, etc.
 - Clear font hierarchy, spacing, and alignment
 - Maintain color contrast and accessible design

3. Optional CSS Features

- Toggle between light and dark themes using CSS variables
 - Smooth scroll or animated section reveal
 - Reusable utility classes for spacing and alignment
-

🎯 Performance Criteria

Each submitted project will be evaluated against the following dimensions:

Criteria	Weight	Excellent (🏆) 4 (100%)	Very Good (👍) 3 (85%)	Satisfactory (👍) 2 (70%)	Needs Improvement (❌) 1 (50%)
✅ Completeness of Sections	30%	All required sections implemented	Most sections implemented	Some sections missing	Several core sections missing
🎨 UI Design & Responsiveness	20%	Polished, responsive, elegant	Clean and functional	Acceptable layout	Layout is broken or not responsive
💻 Code Quality	20%	Semantic, clean, well-commented	Mostly well-structured	Some readability issues	Poorly structured, unclear
✨ Animation & Interaction	10%	Elegant transitions, hover states, or animations	Minimal interaction	Inconsistent or underdeveloped	Not implemented
📁 Project Organization	10%	Clear folders/files + BEM or modular naming	Mostly organized	Some confusion in structure	Chaotic or unstructured
📦 Git & GitHub	5%	GitHub repo with meaningful commits	GitHub used, minor issues	Few commits or unclear history	Git not used properly
📖 Documentation	5%	Clear README with setup + walkthrough	Partial README	Minimal README	Missing or vague README

Assessment Methods

The project will be assessed by the course trainer using the following method:

1. Initial Review

Open the GitHub repository and view the live version or local files.

2. Feature Checklist

Verify presence of required sections, responsiveness, and interactions.

3. Code Review

- File and folder structure
- Use of semantic HTML

- CSS maintainability, consistency, and modularity

4. Live Demo (Optional)

Students may present their site and discuss design decisions.

5. Scoring Sheet

Based on the performance criteria above, each student will receive structured feedback and pass/fail status.

Deliverables

Students must submit the following:

-  A **GitHub repository link** containing:
 - `index.html` and `style.css`
 - Optional `/images` and `/projects` folders
 - A functional and responsive portfolio website
 -  A `README.md` file including:
 - Project overview
 - Feature list
 - How to view or run the project
 - Optional: Screenshots or design notes
 -  (Optional) `documentation/` folder:
 - Wireframes or sketches
 - Additional developer notes
-

Optional Improvements (Bonus)

- Add **dark/light mode** with CSS variables
 - Animate sections with `@keyframes` or `scroll-behavior: smooth`
 - Add a **favicon**, meta tags, and SEO-friendly `<head>` tags
 - Use a **form submission service** like Formspree for the contact form
 - Implement a **project filter** (using pure CSS `:checked` tricks)
-
